

MILESTONE

100

citations

on the first paper of my PhD.

"AI-Tutoring in Software Engineering Education"

Frankford, Sauerwein, Bassner, Krusche, Breu

ICSE-SEET 2024 · Google Scholar, June 2026

Time to see how far the impact actually went...

swipe →

So I followed every citation.

Then their citations. Then theirs.

A complex network graph visualization with a large orange '977' in the center. The graph consists of numerous blue nodes connected by thin blue lines, forming a dense, circular, and somewhat spiral-like structure. The nodes are arranged in concentric layers, with the innermost layer being the most dense. The overall shape is roughly circular, with many lines radiating outwards from the center. The background is a dark blue gradient.

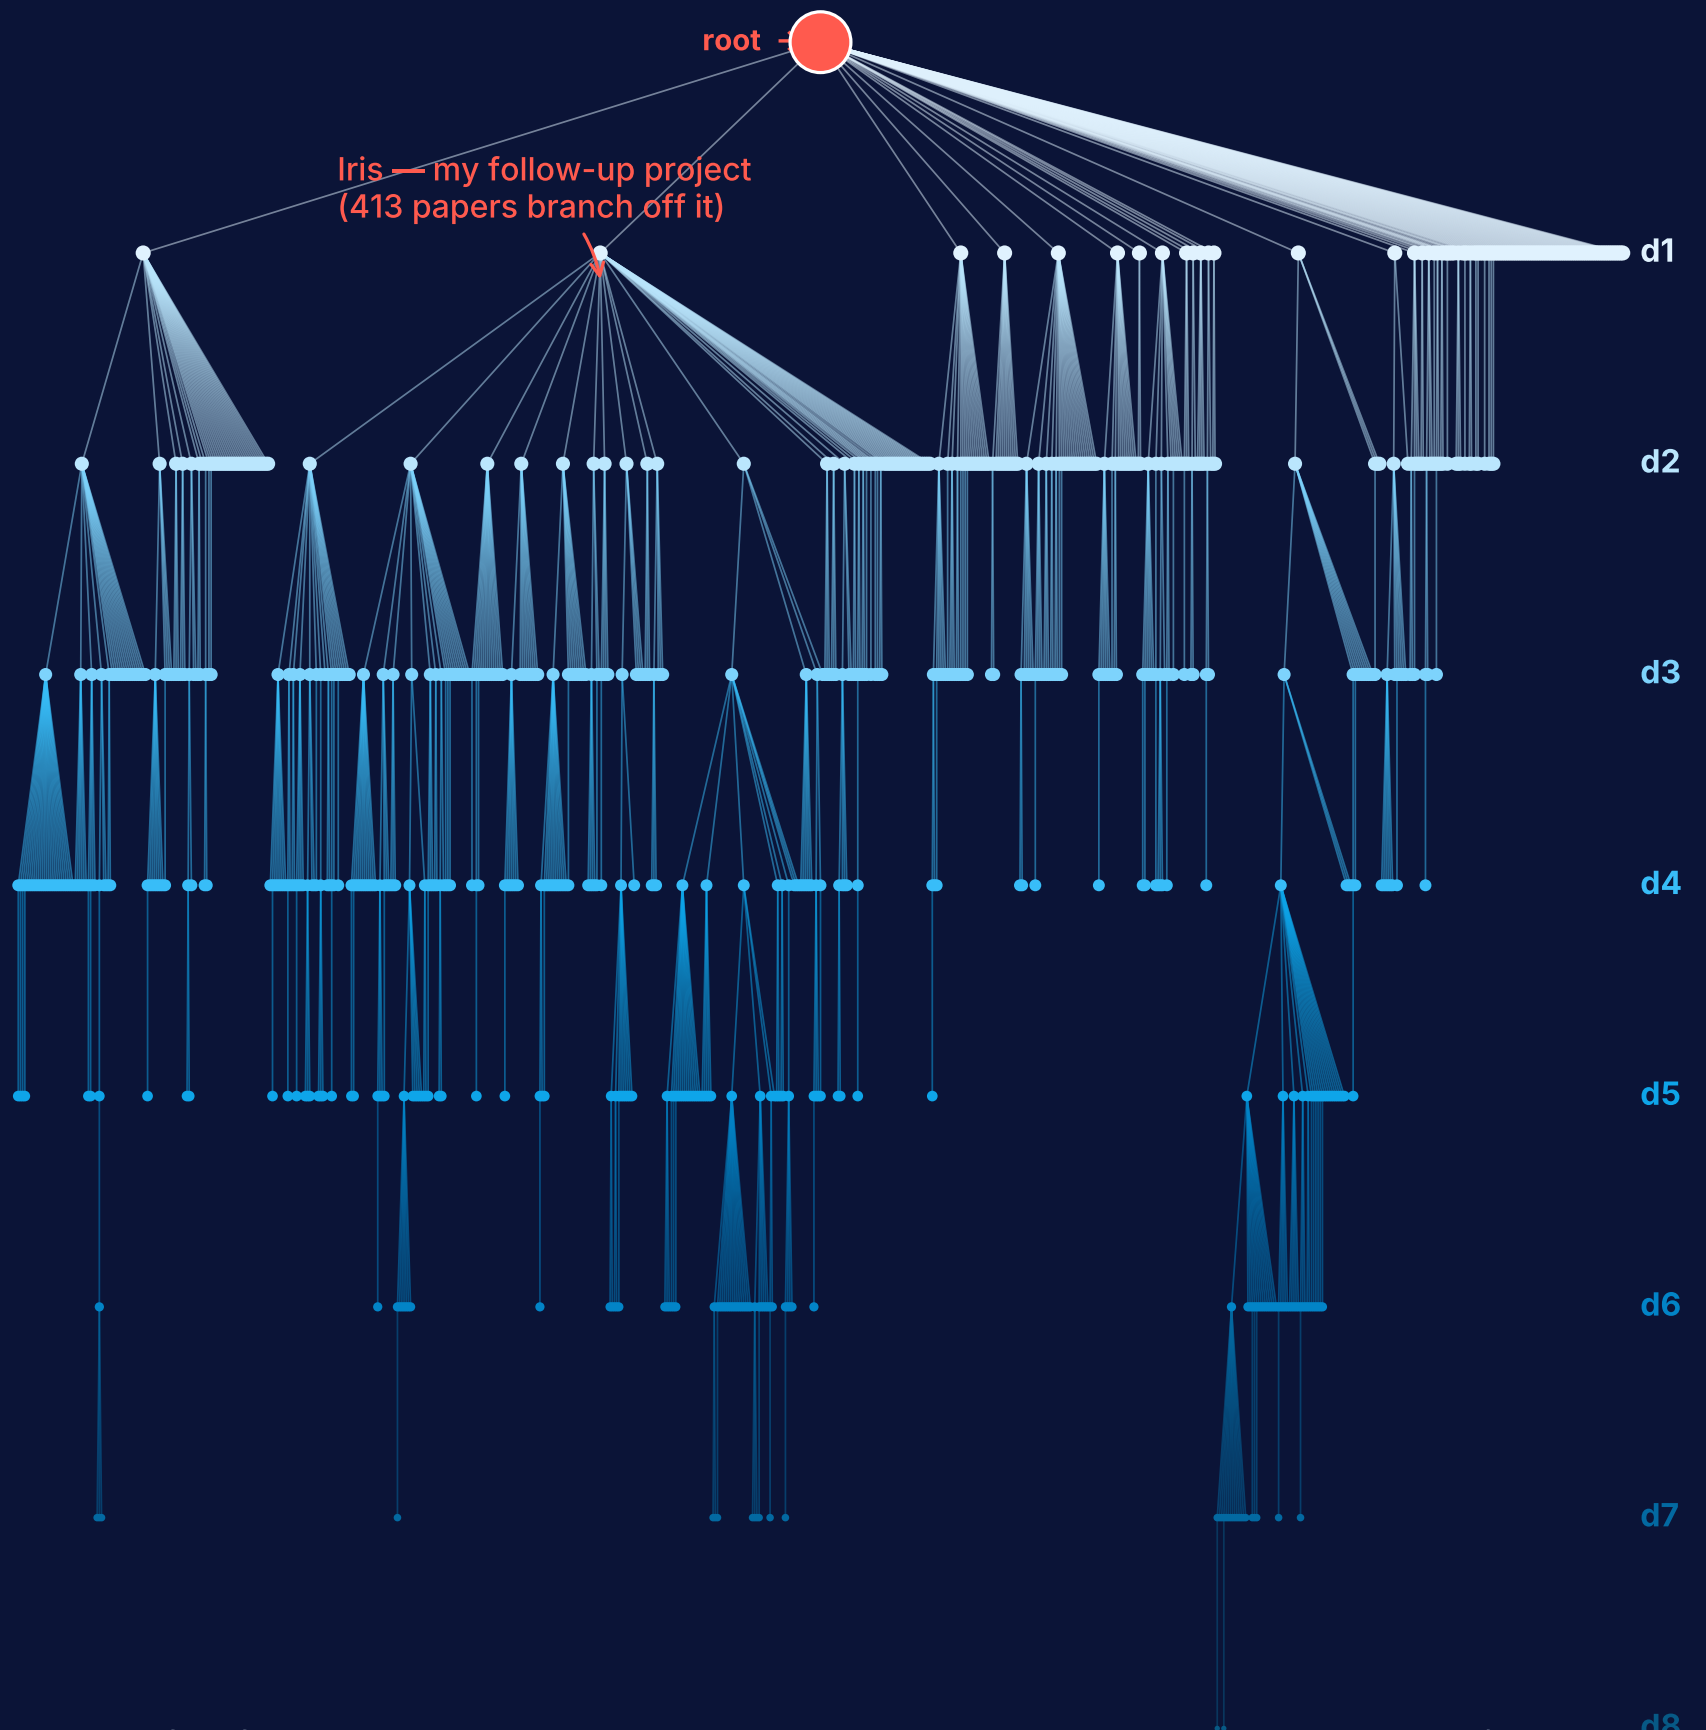

977

977 papers turned out to be built on mine.

8 generations deep.

From 1 paper to 977.

Each layer = one generation away from my paper.

THE TAKEAWAY

Pretty cool to see the work
had some real impact
in the AI tutoring space :)

Want to see the full tree?

Every paper is in there, zoomable and searchable.
